## Continuation Sheet (PTO-303)

Continuation of 3. NOTE: The amendment to claim 1 recites, "affecting a change in gene expression of a keratinocyte". The amendment to the claims also remove "reprogramming a keratinocyte" and "reprogrammed cell". The addition of the phrase "affecting a change in gene expression of a keratinocyte" and the removal of recitations encompassing reprogramming broaden the scope of the instant claims and therefore the amendment would require new considerations and search. Also "affecting a change in gene expression" broadens the scope to causing any change in gene expression. The specification does not provide implicit or explicit support for any other changes in gene expression other than changes that result from exposure to methylation and deacetylation agents that may be involved in reprogramming a cell. Therefore, this recitation along with the removal of reprogramming language introduces issues of new matter. Therefore, because the amendments introduce new issues of consideration and search and introduce new matter, the amendments will not be entered.

Continuation of 11. does NOT place the application in condition for allowance because: 112 2nd Paragraph

Claims 1-12 stand rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicant traverses this rejection on the grounds that the amendment to the claims now limit the scope of the invention to the working examples found in paragraphs [0096], [0163], and [164]. This argument is not found persuasive because the disclosure in these paragraphs teach a change in the expression of the telomerase gene and neural specific genes that result from the exposure of keratinocytes to deacetylating and methylating agents. However, the claims encompass affecting any change in any gene expression profile of a keratinocyte, which encompasses many more genes than disclosed in the above paragraphs. However, the specification does not support such broad changes in gene expression profiles and only teaches changes associated with reprogramming a cell, which are also not enabled. Therefore, because Applicant's arguments are not found persuasive and also because the amendments are not being entered, the instant rejection is maintained.
